

Program Structure

Bachelor of Technology (Mechanical Engineering)

Duration: 04 Years

Batch: 2026-2030

**Department of Mechanical Engineering
School of Engineering and Applied Sciences**

Vision of the University:

To be a global leader in education, research, and innovation, empowering higher learning ecosystem.

Mission of the University:

- Empower all the members of the Bennett ecosystem and provide thought leadership, focus on nation building and prepare our graduates to move with the Times.
- Cultivate international partnerships and collaborations with academic institutions, industry, and government organizations and provide a rigorous and innovative education that equips students with the knowledge, skills, and ethical values required to excel in their careers.
- Foster a culture of lifelong learning, adaptability, and critical thinking, ensuring graduates are prepared to tackle emerging challenges in all academic fields.
- Drive interdisciplinary research and innovation, pushing the boundaries of human knowledge, addressing pressing global issues and solving real world problems.
- Enhance a collaborative environment that encourages faculty and students to engage in research, innovation, and entrepreneurship, creating a lasting impact on society.
- Promote diversity, equity, and inclusion, ensuring that all individuals, regardless of background, feel welcomed, respected, and empowered.
- Prepare students to become global citizens, capable of addressing global challenges and contributing to the well-being of communities worldwide.
- Provide a globally connected career services networking with graduate employers and alumni.
- Foster a strong sense of ethical responsibility in our graduates, emphasizing the importance of ethical conduct, sustainability, and social impact in professional practice.
- Commit to ongoing assessment and improvement of our programs and invest in modern infrastructure and advanced technology to support teaching, research, and innovation adapting to the evolving needs of students, industries, and society.

Vision of the School:

To be a leading centre of excellence in engineering education, research, and innovation, fostering the development of skilled engineers who will shape the future of science and technology and contribute to the betterment of society.

Mission of the School:

1. Provide high-quality science & engineering education: The school is dedicated to delivering rigorous, comprehensive, and contemporary education that equips students with the necessary knowledge, skills, and ethical values to excel in the field of science & engineering.
2. Foster research and innovation: Encourage and support cutting-edge research and innovation in various scientific & engineering disciplines, promoting interdisciplinary collaboration, entrepreneurship skills to address real-world challenges. The school aims to be at the forefront of technological advancements and contribute to the body of knowledge in science & engineering.
3. Promote experiential learning: Create an environment that generate new knowledge with emphasis on hands-on learning experiences, practical applications of scientific & engineering principles, and collaboration with industry partners. The school strives to develop graduates who are ready to tackle real-world problems, promote entrepreneur and adapt to a rapidly evolving engineering landscape.
4. Cultivate professional ethics and social responsibility: Instil in students a strong sense of professional ethics, integrity, and social responsibility. The school aims to produce engineers who are committed to sustainable development, ethical practices, and actively contribute to society's well-being.

Vision of the Department:

- Attract, support, and retain the world class faculty.
- Create the state-of-the-art research and lab facilities.
- Continuously strive for excellence in teaching and student experiences within and beyond Mechanical and Aerospace Engineering.
- Institutionalize and promote a culture of collegiality, collaboration, achievement, and integrity.

Mission of the Department:

The mission of the Department of Mechanical Engineering is to provide high-quality engineering education at the Bachelor's and PhD levels, appropriate to the discipline and consistent with our status as a world class academic leader and research-driven University.

In particular, the elements of our mission are to:

1. Impart our students proficiency in solving engineering problems with professional ethics and serving the global needs of the society.
2. Prepare our students for a global technical career and for advanced study in mechanical engineering, aerospace engineering, or other relevant fields.
3. Impact significant technical, societal, and environmental challenges through innovative and collaborative research, transformative education, and leadership.

Program Educational Objectives (PEO):

1. Graduates will be engaged in ongoing learning and professional development through self-study, continuing education in mechanical engineering and also in other allied fields.
2. Graduates will apply their engineering skills, exhibiting critical thinking and problem solving skills in professional engineering practices or tackle social, technical and business challenges.
3. Graduates will adopt ethical attitude and exhibit effective skills in communication, management, teamwork and leadership qualities.

Program Outcomes (POs) and Program Specific Outcomes (PSOs):

PO1: Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2: Problem analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3: Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate considerations for public health and safety, and cultural, societal, and environmental considerations.

PO4: Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5: Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6: The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues, and the consequent responsibilities relevant to the professional engineering practice.

PO7: Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9: Individual and teamwork: Function effectively as a member or leader in diverse teams and in multidisciplinary settings.

PO10: Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11: Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: Life-long learning: Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSOs:

PSO1: Effectively build and communicate the solutions using learnings from basic mechanical engineering, basic sciences, mathematics, computational skills and tools.

PSO2: Ability to conduct experiments and simulate real-life problems in engineering using computational techniques and instrumentation; and can work independently in research or industrial environments.

PSO3: Capability to compete with the available employment opportunities and solve complex engineering problems related to production, design, thermal and allied industries using systematic tools, while giving due consideration to the environment protection and sustainability.
